

To whom it may concern

The REACH regulation (EC 1907/2006, Registration, Evaluation, Authorisation and Restriction of Chemicals) aims to control the risk of chemicals in the EU. Registration is required for certain chemical substances.

marco GmbH, Dachau, is a downstream user (DU) according to REACH terminology for all products.

All marco products (i.e. electro-mechanical systems and piezoceramic modules) are finished or semi-finished products and accordingly can be defined neither as chemical substances nor as preparations (refer to REACH Regulation Chapter 2, Article 3 - Definitions).

The marco product range is thus not subject to registration according to the REACH regulation.

To build piezoceramic products, marco makes use of chemicals which may be considered as substances or preparations according to the regulation.

marco declares, that

1. no substances are imported from non-EU-countries,
2. safety data sheets (SDS) are available for all substances where REACH applies that are used in the marco product range,
3. marco is in close contact to suppliers of these substances with respect to use and registration,
4. no substance used exceeds the quantity limit of 1 tonne per year so they are not subject to registration according to Article 7 of the REACH regulation,
5. the substances used in products will not be released under normal or reasonably foreseeable conditions of use (Article 7).
